Judy –

Thank you for your email. The NCEES-examined branches of professional engineering recognized by the Board includes Architectural Engineering (Building Systems); see Oregon Administrative Rule (OAR) 820-010-1010. There are currently 7 professional engineers especially qualified in Building Systems. It is important to note that the Board added Building Systems to the rule in June of 2015. Please review OAR 820-010-1020 for the various educational/experience pathways to registration: it may be helpful to compare the current educational requirements to OSU's proposed curriculum for a Bachelor of Science in Architectural Engineering. The following link will provide you with the OARs http://arcweb.sos.state.or.us/pages/rules/oars_800/oar_820/820_tofc.html. If at any time you have additional questions, please do not hesitate to contact me.

Sincerely, Mari

MARI LOPEZ | ADMINISTRATOR
Oregon State Board of Examiners for Engineering and Land Surveying

Subject: RE: PE-Architectural

Mari,

Apologies for this e-mail out of the blue. We are proposing a new Architectural Engineering degree program at Oregon State University. I've attached a draft Executive Summary of the proposal -- as you can see, we are anticipating attracting increasing numbers of women and underrepresented minorities into a program that will prepare engineers well versed in design and construction of green, energy efficient buildings.

We've had correspondence with OSBEELS about the the PE-Architectural and licensure as a PE qualified in Building Systems (see below) ... and now have been asked by the internal review committee here at OSU to obtain the following information:

1. Is there potential to offer the PE-Architectural in Oregon in the future, if this Architectural Engineering degree program is established at Oregon State University?

2. Could we have a number of the engineers in Oregon who are licensed in Building Systems?

Any assistance would be appreciated, even if pointing me to someone else who might have this information. Also, I am happy to call to discuss at your convenience.

Thank you!
Judy

Veronica,

Thank you for your response last year on the Architectural Engineering NCEES exam, etc. We are working on a new Architectural Engineering degree program proposal and have been asked to obtain the following information:

1. Is there potential to offer the PE-Architectural in Oregon in the future, if this Architectural Engineering degree program is established at Oregon State University?

2. Could we have a number of the engineers in Oregon who are licensed in Building Systems?

Any assistance would be appreciated, even if pointing me to someone else who might have this information.
Thank you!
Judy

Hello,

If the applicant has passed the Architectural Engineering NCEES examination they would be considered for licensure as Professional Engineering especially qualified in Building Systems. If you have any further questions, please feel free to contact the Board office.

Sincerely,

VERONICA GLORIA | RECEPTIONIST

Subject: PE-Architectural

Hello! I noticed that the PE-Architectural is not offered in Oregon. If an engineer has a PE (Architectural) from another state, but practices in Oregon, is the licensure recognized? Is the engineer also expected to sit for one of the Oregon PE-Mechanical exams (e.g.,HVAC and Refrigeration), if working in that discipline?

Are there any plans to offer the PE-Architectural in the future?

Thank you for your time.
Judy
